

Blocking Your Use of Web ISIS

When you use **WebISIS** it uses Internet Explorer as the default ISIS engine.

If you have certain search/toolbars installed on Internet Explorer they have Pop Up blockers.

These pop up blockers affect the different screens needed to run Web ISIS.

You need to turn them OFF!

These toolbars will look like this with a build in search engine and popup blockers. They usually cause your problem.

In order to turn them off you need to:

Go to **View > Toolbars** and *Uncheck* Yahoo! Toolbar and or Google Toolbar. Or any toolbar that happens to be there. If you get another popup asking if you want to **Disable** the Toolbar click on it.
