The following illustrations and tips show the best way to secure your bike and keep it safe.

When locking your bike, think like a crook. For example, select a location where there are other bikes. The chances are better that there will be a bike with a less-secure lock or even without one, and thieves will usually look for unlocked bikes first. Likewise, lock your bike in a well-lit area where a thief won’t be able to hide. Also, don’t routinely lock to the same spot day after day. A determined thief might “mark” your bike, round up the tools to steal it and take it.

a: Position your bike frame and wheels so that you fill up or take up as much of the open space within the lock’s U portion as possible. The tighter the lock up, the harder it will be for a thief to insert a pry bar and pry open your lock. Notice here that 2 different locks are used.

b: Lock to a fixed, immovable object, a parking meter; or a permanent bike rack cemented or anchored into the ground. It must prevent a thief from slipping the locked bike off over the top of the pole. Beware of locking to items that can easily be cut, broken or removed.

c: Always secure your components and accessories, especially those that can be easily removed, such as quick-release wheels and seats. Use your cable lock on these items looping it through them first and then through your U-lock.

d: Try not to let your lock rest against the ground where a thief can smash the lock. And, if your U-lock has its keyway on the end of the crossbar, place the lock with its keyway end facing down toward the ground. This makes it harder for the thief to access your lock.

Buy high-quality locks. Kryptonite, for instance. Cheap locks will only waste your money and give you a false sense of security.

Register your key number(s) with the lock company that made your lock. Kryptonite, for instance, offers lifetime key registration and 24-hour key-replacement services.

Write down your key numbers and/or lock combination and put them in a handy file with your bike registration information, purchase receipts and other important documents.

Always keep your bike locked: at home or in the dorm; everywhere. Thieves look for unlocked bikes. They may be thieves, but they’re not dumb.

In high-theft areas, 2 locks are better than 1. It stinks, but it’s true. Combine a cable and a U-lock, or even 2 U-locks. The more time and trouble it takes a thief to attack your bike, the less likely your bike will be stolen.

Consistency. Lock up every time. It’s always the one time you don’t lock that your bike is stolen.

Register your bike. Of the thousands of bikes police recover each year; the only ones that we’re sure are going home are the ones registered with the National Bike Registry.

Since the NBR started protecting bicycles in 1984, its recovery rate is 100%. Every time a police officer has recovered a bike registered with the NBR, it’s been returned to its owner.

What’s more, the National Bike Registry is the only bike-registration system that works across state lines. So, if your bicycle is stolen in California and turns up in Illinois, they can get it back to you. No one else, not even the police are set up to do that. For more information:

The National Bike Registry
